## What We Do

Liberty Beverage Solutions leans on 15+ years of design and manufacturing experience to delivery systems that will continuously generate high purity, Food Grade Nitrogen on demand. We replace expensive and inconvenient, beverage gas cylinders by engineering on-site, on-demand nitrogen generation systems, gas management consoles and liquid CO2 Tanks.

- Reduce beverage dispense costs
- Eliminate waste
- Improve safety
- Free up valuable floor space

## Draught Grade Nitrogen

In all draught systems, the dispense gas propels beer from the keg to the faucet. Because the dispense gas comes into direct contact with the beer, it must meet strict criteria for purity. Because of the extreme damage caused by exposure to oxygen, compressed air should never be used to dispense draught beer.

- Exceeds Brewers Association decree of 99.70% Nitrogen
- Only Certified Food Grade Nitrogen Generator on the Market
- On Demand Production

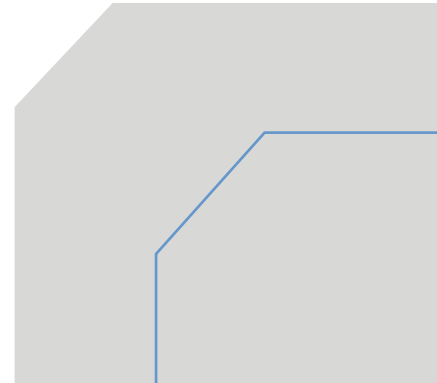

## Gas Management Systems

The applied pressure required to deliver draught beer from the keg to the faucet typically exceeds the proper pressure of pure CO2. In this case, a blend of CO2 and nitrogen (N2) gases is necessary. Our Gas Management Console combine TruMix® technology and a flow indicator to help the operator manage gas use and reduce waste.

- SB Series: Single Blend for short low volume applications and keg boxes
- GB Series: Dual Blend includes stout, custom blend (x1), plus flow indication for 100% CO2/ N2
- GB Series Triple: Triple Blend includes stout, custom blend (x2), plus flow indication for 100% CO2/ N2

## CO<sub>2</sub> Tanks

- From 200 LBs to 6000 L
- Heat Exchangers for high flow applications
- Fill Boxes and other accessories

*“My familiarity with Liberty made it an easy call when choosing my nitrogen source for 510 Tavern. The compact, efficient design of their nitrogen generator enabled me to locate it in an area that would otherwise be impossible for the competition. Liberty’s N2 generator also does not require a storage tank which frees up even more valuable floor space in the back of the house.*

*Their gas management system enables my staff to monitor pressures from both the nitrogen and CO2 sources, which provides peace of mind knowing that our system is operating properly. The system also employs a meter that is active whenever gas is running through it. If we are not serving and the meter is active, my staff knows to check for leaks. This is a very effective and inexpensive solution for saving CO2.*

*This system has been a very good investment for me at both of my establishments and I am confident it will work for you!”*

## Nitrogen Generators

GN2 Series Nitrogen Generators from Liberty Systems generate **The Perfect Pour...Every Time!**

- More Floor Space in Your Restaurant
- No More Need for those High Maintenance Cylinders
- 3 Years between Filter Changes
- 5 Year Warranty on Compressor

Above (Part # BRW-NG40) is the 40 Cu. Ft. Nitrogen Generator.

Part # BRW-NG10

Part # BRW-GMCB-60.40
